

## 5.84 Release Enhancements (July 2021)

### Paragon MLS

#### Clean up of Unnecessary White Space in ConnectView

To utilize all the screen space, we removed some of the unnecessary white space that was at the top of ConnectView.

### Collaboration Center

#### Update to your Client's Collaboration Center – Shortcut App Icon

Your Clients can save an icon to their home screen on their mobile devices.

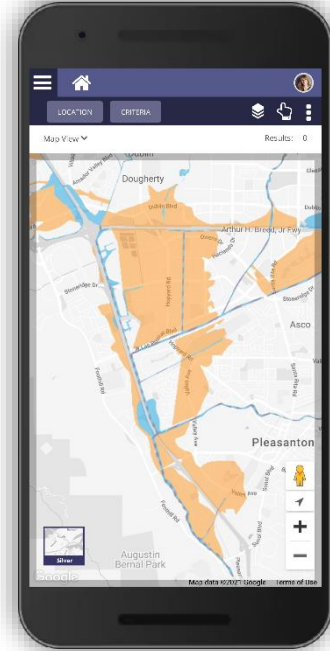

We have updated the default icon to resemble more of an app-like appearance.

# Paragon Connect

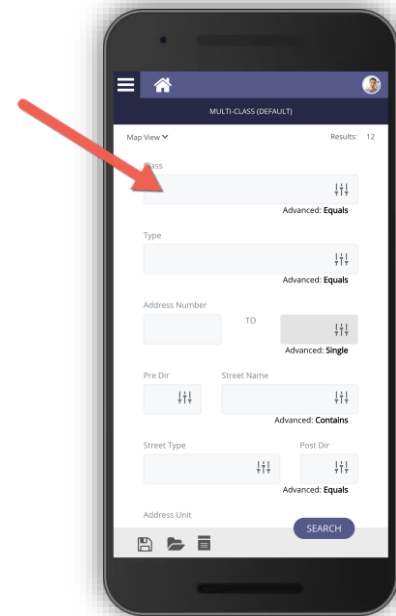

## Map Layers

You are now able to access your favorite default mapping layers from any device! The default layers that are available in Paragon Professional are now available in Paragon Connect! Switch to the silver map type and be able to better visualize the map layers like flood plain, traffic areas, and more.

## Multi-Class Search

In this version of Paragon Connect you will have the ability to search across classes with the Multi-Class search! This search syncs with Paragon Professional and will open the door to using more multi-class type searches throughout the application.

---

## Share to Twitter and Facebook

We are happy to announce that we've added the ability to share listings to Facebook and Twitter from Paragon Connect. If your MLS currently has this feature enabled in Paragon, the share features will automatically appear in Paragon Connect. If your MLS doesn't have them enabled but would like to do so, please contact your board/association. With the addition of these two new sharing features you can now email, text, create a link, and share out to Twitter or Facebook!
